We are your partner
for economical filtration!

Hydrophilic, highly porous and food-compliant.

WFPEF-F membrane filter cartridges are sterilisable, integrity tested and are supplied in a pre-rinsed version. They are free of binders, adhesives or additives, have a low differential pressure with a high throughput rate and a high dirt-holding capacity with a long service life.

WTKF cartridge filter housing with clamping clip closure.

The self-standing WTKF housing is made of AISI 316L stainless steel and has an inwardly curved housing bottom. Our depth filter cartridges are used for rinsing and cleaning processes in food production.

For sterile and high-purity production lines in the beverage industry.

The WS-Sanitary housing made of highly polished AISI 316L stainless steel is used in combination with our WFPPF folding elements and WFPEF-F membrane filter cartridges as a pre-filter during filling, to filter out the turbidity (clarification) and then as a sterilisation filter.

WFB filter bags for the cleaning circuit.

The WTBF-GDS stainless steel bag filter housing with our WFB filter bags is used for cleaning brine within cheese production. The filter bag has all certificates for contact with food. The best choice for safe filtration with a long filter life!

Adaptable standard housing with socket.

Our WTBF-GDS bag filter housing is adapted to any situation so that the position, type and size of the inlet and outlet connections are variable. The housings can also be equipped with our stainless steel screen baskets. Customised development, design and manufacture: that's what Wolftechnik stands for.

Cleanable WTBF sieve baskets made of stainless steel mesh.

Whether single-layer, multi-layer or backwashable. Our WTBF sieve baskets are cleanable and reusable. For easier handling, also available with crossbar or round bar. Can be used as fine filters, coarse filters, particle filters ...

Safety through our tank ventilation filters.

The 01WTBE-PP housing with hydrophobic and highly porous WFPTFE membrane filter cartridges are used for the sterile and water-resistant ventilation of storage tanks. This ensures the important pressure equalisation of the storage tanks during filling and draining.

WFMBR depth filter cartridge for highest purity.

WFMBR filter cartridges are used in the food industry as pre-filters in water treatment plants and as post-filters in filling plants. In addition, the depth filter cartridge has all important EU certificates, such as FDA CRF21 certificate, food, REACH and RoHS declarations of conformity.

Versatility, flexibility and
safety
when it comes to the latest
filter technology.
