

**wolft**technik  
filtersysteme

We are your partner  
for economical filtration!

## Single layer or double layer. WFB filter bags.

They develop their full potential in industrial applications such as cooling circuits or in parts cleaning systems. WFB filter bags have all certificates for contact with food. For a long filter life and high filtrate quality!

## Modifiable standard housings with socket.

The compact WTBF-GDS bag filter housing can be modified individually so that the position, type and size of the inlet and outlet connections are variable. Development, design and tailor-made production: that's what Wolftechnik stands for.

## Filter change without interrupting the process.

DWTBF double bag filter housings are equipped with manual switching for parallel or individual operation. Security for constant operation!

## For high demands on ultrapure water quality.

Hydrophilic WFPES membrane filter cartridges as final filters for water Preparation systems retain almost 100% of all particles and bacteria that are larger than their specified pore size. Our filter elements are pre-rinsed and meet RoHS and REACH criteria.

## WTKF cartridges filter housing with clamp closure.

In combination with our depth filter cartridges, the self-standing housing made of AISI 316L stainless steel, with an inwardly curved housing bottom, is an insurmountable team in the field of water treatment!

## 1 filter cartridge with 2 filter layers.

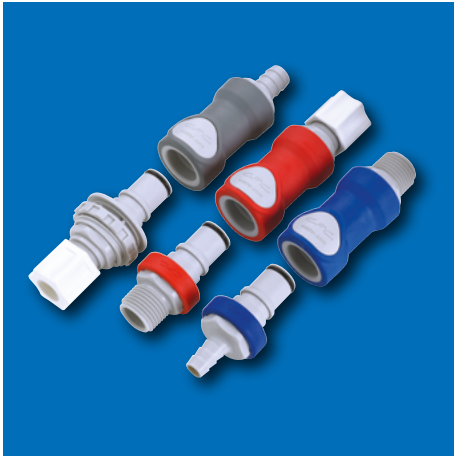

The 2-layer filter gradation increases the WFMG master groove depth filter cartridges has its dirt holding capacity. Particularly reliable with additives and highly concentrated liquids. Extremely good fiber binding, with NSF42 and FDA CRF21 certificate and food, REACH and RoHS compliant!

## Hydrocyclones and multi-cyclones for better cleaning efficiency.

Individually manufactured stainless steel centrifugal separators from Wolftechnik. Widely used in many industrial applications, always where solids can be separated by the rotating flow alone.

## CPC quick couplings when it has to be fast and safe.

In racing, the couplings are convincing in drinking systems and cooling circuits. For water cooling of medical equipment, surgical lasers, server cabinets and PCs, our non-spill couplings are the ultimate connection.

Versatility, flexibility and  
safety  
when it comes to the latest  
filter technology.
